

Policy regarding submission of projects to NGS prior to NAD 83(NSRS2007) datasheet availability

In the interim before data sheets with the NAD 83(NSRS2007) coordinates are available, use one of the following options:

1. From the Web page listings, manually enter the new position coordinates to use for control in the adjustments and proceed with the required adjustments as previously performed. The project may be submitted to NGS but will not be entered into the database until the National Readjustment is loaded. NGS has not determined how local and network accuracies will be computed so there is no requirement for their submission at this time.
2. Submit the project using the currently published control. It will be entered in the database and published relative to the currently published control values. A readjustment to determine 2007 values will need to be completed at some future time. (For information about readjustments of projects to the 2007 values, click on the policy statement).
